# Cambridge Handbook of Intelligence and Cognitive Neuroscience

*Edited by Aron K. Barbey, Sherif Karama, and Richard J. Haier*

Cambridge University Press, for 2021

**Table of Contents**

**A. Fundamental Issues**

**Chapter 1. Defining and Measuring Intelligence: The Psychometrics and Neuroscience of *g***
*Thomas R. Coyle*

**Chapter 2. Network Neuroscience Methods for Studying Intelligence**
*Kirsten Hilger and Olaf Sporns*

**Chapter 3. Imaging the Intelligence of Humans**
*Kenia Martínez and Roberto Colom*

**Chapter 4. Research Consortia and Large-Scale Data Repositories for Studying Intelligence**
*Budhachandra Khundrakpam, JB Poline, and Alan Evans*

**B. Theories, Models, and Hypotheses**

**Chapter 5. Evaluating the Weight of the Evidence: Cognitive Neuroscience Theories of Intelligence**
*Matthew J. Euler and Ty L. McKinney*

**Chapter 6. Human Intelligence and Network Neuroscience**
*Aron K. Barbey*

**Chapter 7. It's About Time: Towards a Longitudinal Cognitive Neuroscience of Intelligence**
*Rogier A. Kievit and Ivan L. Simpson-Kent*

**Chapter 8. A Lifespan Perspective on the Cognitive Neuroscience of Intelligence**
*Joseph P. Hennessee and Denise C. Park*

**Chapter 9. Predictive Intelligence for Learning and Optimization: Multidisciplinary Perspectives from Social, Cognitive and Affective Neuroscience**
*Christine Ahrends, Peter Vuust, and Morten L. Kringelbach*

**C. Neuroimaging Methods and Findings**

**Chapter 10. Structural and Diffusion-Weighted Imaging of Intelligence**
*Erhan Genç and Christoph Fraenz*

**Chapter 11. Structural Neuroimaging of Intelligence Differences**
*Stefan Drakulich and Sherif Karama*

**Chapter 12. Functional Brain Imaging of Intelligence**
*Ulrike Basten, Christian J. Fiebach*

**Chapter 13. An Integrated, Dynamic Functional Connectome Underlies Intelligence**
*Jessica R. Cohen and Mark D'Esposito*

**Chapter 14. Biochemical Correlates of Intelligence**
*Rex E. Jung and Marwa O. Chohan*

**Chapter 15. Good Sense and Good Chemistry: Neurochemical Correlates of Cognitive Performance Assessed in Vivo through Magnetic Resonance Spectroscopy**
*Naftali Raz Jeffrey A. Stanley*

**D. Predictive Modeling Approaches**

**Chapter 16. Predicting Individual Differences in Cognitive Ability from Brain Imaging and Genetics**
*Kevin M Anderson and Avram J Holmes*

**Chapter 17. Predicting Cognitive-Ability Differences from Genetic and Brain-Imaging Data**
*Emily A. Willoughby and James J. Lee*

**E. Translating Research on the Neuroscience of Intelligence into Action**

**Chapter 18. Enhancing Cognition**
*Michael I. Posner and Mary K. Rothbart*

**Chapter 19. Patient-Based Approaches to Understanding Intelligence and Problem-Solving**
*Shira Cohen-Zimerman, Carola Salvi, and Jordan Grafman*

**Chapter 20. Implications of Biological Research on Intelligence for Education and Public Policy**
*Kathryn Asbury and Diana Fields*

**Chapter 21. Vertical and Horizontal Levels of Analysis in the Study of Human Intelligence**
*Robert J. Sternberg*

**Chapter 22. How Intelligence Research Can Inform Education and Public Policy**
*Jonathan Wai1and Drew H. Bailey*
